ABOUT ME

Junior Backend Developer specialized in building web applications with the LAMP stack (Linux, Apache, MySQL, PHP). Skilled in object-oriented programming, MVC architecture, REST APIs, database design, and backend development.

I have independently developed full web projects from scratch, including ChessNova, an online chess platform featuring authentication, game management, matchmaking, WebSockets, and a structured backend architecture. I also gained practical experience working on Moodle platforms through PHP plugin development, migrations, debugging, and system maintenance.

EDUCATION

High School Diploma in Computer Science

ITIS Galileo Galilei · Rome 09/2020 – 06/2025

Final grade: 87/100 (20/20 in Computer Science)

www.itisgalilei.edu.it

WORK EXPERIENCE

Freelance Web Developer Remote · 05/2026 - Present

- Migrated and upgraded **Moodle LMS platforms** to the latest stable versions.
- Designed and developed **custom Moodle plugins**.
- Performed in-depth **debugging and performance optimization**, resolving critical issues related to database queries.
- Worked extensively with the **LAMP stack** (Linux, Apache, MySQL, PHP), always following security best practices.

PROJECTS

ChessNova 05/2026 – 06/2026

chessnova.win GitHub

ChessNova is an online chess platform developed from scratch using the LAMP stack (Linux, Apache, MySQL, PHP). The project includes a complete user authentication and management system, game creation and management, matchmaking, real-time move updates through WebSockets, and a backend designed with a modular architecture based on the MVC pattern and object-oriented programming principles. The application uses REST APIs for client-server communication and a MySQL database designed to ensure data integrity and scalability.

Portfolio 07/2026

aleferraresi.ddns.net GitHub

Personal portfolio developed to showcase my professional profile, technical skills, and completed projects. Built with PHP, HTML, CSS, and JavaScript, with bilingual support (Italian/English) and a clean, responsive layout.
